**CENTENNIAL WOODS RECLAIMED SNOWFENCE
SELECTED FOR AUTHENTIC RESTORATION OF
HISTORIC 1870s COLORADO CABIN**

Hardin Cabin features variety of Centennial Woods flooring, door and window trim reclaimed snowfence products

A view of the interior of the historic cabin in Red Feather Lakes, Colorado

LARAMIE, WYO. (July 29, 2009)—Centennial Woods announced today that the historic 1870s cabin built by John Hardin in Red Feather Lakes, Colorado, has been restored using the company’s reclaimed snowfence products.

“After visiting the Centennial Woods warehouse in Laramie, Wyoming, I realized that these products were the perfect choice for our 1870s historic cabin restoration project,” said Randy Gillen, president of Big Horn Custom Builders, which led the project.

“Bringing the Hardin Cabin back from the grave to its original glory was a tall order, and Centennial’s reclaimed snowfence products helped us achieve our client’s goals. We’ve utilized the Centennial products strategically in this project for flooring, interior and exterior trim and to fabricate our doors – wherever warmth and character were desired.”

Centennial Woods' products are naturally rough and weathered but also can be purchased in milled and modern configurations. The product suite consists of wood commonly used for siding and soffit to internal uses like floors, ceilings and wainscoting. This unique wood is also increasingly used for furniture, doors, window trimming, cabinets and other specialty applications. The wood comes in five basic natural color schemes, in 1x6, 2x6, and 2x8 dimensions and in lengths up to 16 feet.

The Village of Red Feather Lakes has become home to many year round residents and is growing to be a favorite vacation spot for visitors from around the country who enjoy trout fishing, strolling through the village or photographing the spectacular scenery of the area.

About Centennial Woods

Before Centennial Woods began harvesting Wyoming snowfence, older boards were often left on the frame until they failed and then burned or thrown into a landfill when replaced. Centennial Woods discovered its strength and beauty and vowed to rescue and reuse it.

Since 1999, Centennial Woods has been maintaining and reclaiming snowfence from the mountainsides and open prairies of Wyoming to create its line of interior and exterior specialty wood products for residential and commercial use around the world. To support its reclamation mission, Centennial Woods has developed an international market for this green Wyoming export. To date, Centennial Woods has reclaimed 6 million linear feet of Wyoming snowfence, the equivalent of 105 miles; keeping more than 10,000 tons of CO₂ from being emitted into the atmosphere and saving the state of Wyoming and other entities more than \$10 million.

Centennial Woods' reclaimed Wyoming snowfence is naturally dried for decades by the Wyoming wind, which produces an intensely beautiful, perfectly dried, strong and true reclaimed board. Centennial Woods is a member of the US Green Building Council (www.usgbc.org) and is proud to be one of Wyoming's great green product companies. Learn more on the web at www.centennialwoods.com.
